

Activity 13: Global Tech Ambassador & Open-Source Pathway Selection

Kanishk Sinha | 3rd Semester B.Tech, Computer Science & Engineering | REVA University

Selected pathways: GitHub Campus Experts and HackerRank Campus Crew

These pathways match my current direction in C++/DSA, Git/GitHub, coding-platform practice and professional portfolio building. They also connect technical growth with community leadership.

Part A: Program Analysis & Target Selection

Criteria	GitHub Campus Experts	HackerRank Campus Crew
Eligibility	18+; formal higher-education student; GitHub user for at least 6 months; more than 1 year remaining before graduation; student status validated through GitHub Student Developer Pack.	Currently enrolled college/university student interested in coding and community. Application includes a short code challenge and interview.
Application cycle	Course sheet: biannual, next cycle around February 2027. Current GitHub documentation says applications open every July for one month, so the official page should be checked before applying.	Course sheet: rolling Spring/Fall applications. Current official Campus Crew page accepts applications.
Focus	Build technical communities, develop leadership, run learning activities and support student developers.	Represent the campus, host coding events, mentor classmates, organize hackathons/challenges and connect students with career opportunities.
Benefits	Leadership training, public speaking and technical-writing development, mentorship/support, community resources and sponsorship opportunities.	Mentorship, experience certificate, career visibility, early feature access, HackerRank Plus, community access, events, swag and milestone rewards.

Verification note: The program requirements above follow the Activity 13 reference sheet. Current official GitHub and HackerRank pages were checked to verify the live eligibility/application process and benefits.

Part B: Readiness Assessment & Gap Analysis

Area	Current position	Gap to close
GitHub / open source	Public GitHub profile with repositories, commits, branches/PR work, GitLens/Live Share and GitHub Pages experience.	Build a stronger sustained open-source contribution history.
Technical skills	C++/DSA, SQL/DBMS, Git/GitHub and coding-platform practice.	Increase DSA depth and show stronger project/contribution evidence.
Technical writing	README files and portfolio documentation are already being developed.	Publish regular technical explanations and project write-ups.
Community involvement	LinkedIn networking and coding-focused social presence are established.	Gain direct evidence of mentoring, organizing or community participation.
Application readiness	GitHub, HackerRank and LinkedIn evidence are available.	Polish resume, quantify achievements and tailor application answers.

4-Week Preparation Roadmap

Week 1	GitHub foundation	Clean profile, improve README/project documentation, pin strongest repositories and identify beginner-friendly open-source projects.
Week 2	Contribution evidence	Make meaningful documentation/code contributions, continue DSA practice and record measurable progress.
Week 3	Community evidence	Participate in a coding/community activity, help peers where possible and publish one technical learning post.
Week 4	Application package	Update resume, organize evidence, draft program-specific answers, practise interview questions and re-check official deadlines.

Part C: Drafted Application Material

Technical Community Motivation Essay (~250 words)

I want to join a student technology community because I want my learning to create value beyond my own coursework. As a Computer Science student, I am building foundations in C++, data structures, SQL, Git/GitHub and problem solving. My portfolio activities have shown me that technical growth becomes more meaningful when it is documented, shared and used to help other students. My goal is to become a stronger developer while also becoming someone who can make technology easier to approach for peers. I want to contribute by organizing beginner-friendly coding sessions, sharing practical Git and GitHub workflows, encouraging students to build public portfolios, and creating small collaborative projects. I am especially interested in communities where students learn through doing rather than only through lectures. GitHub Campus Experts and HackerRank Campus Crew match this direction. GitHub Campus Experts would help me develop community leadership, communication and technical-writing skills, while HackerRank Campus Crew would connect coding practice with campus events, mentoring and competitive programming. I would bring consistency, curiosity and a willingness to learn from other students and mentors. Over the next few months, I plan to strengthen my GitHub contribution history, make meaningful open-source contributions, publish technical learning posts and participate more actively in coding communities. I want to use these experiences to build a stronger application and, more importantly, become capable of creating useful technical opportunities for students around me.

Success Measures

After four weeks, I aim to have a stronger GitHub profile, at least one meaningful open-source contribution, one technical write-up, improved DSA evidence, a refined one-page resume and program-specific application responses ready for review.

Conclusion: These pathways provide a practical next step from portfolio building into technical community leadership and open-source-oriented growth.
